The emergence of civil aviation as a means of mass transportation is primarily due to the large scale construction of jet airplanes in the past 30 years or so. A large number of these jet airplanes is currently operating at or beyond their designed fatigue lives. Thus, the structural integrity of these aging airplanes has become an issue of major concern to all nations of the world. To bring the needed technical and research focus on the issues involved in the life-enhancement and safety-assurance of aging airplanes, the Federal Aviation Administration sponsored a symposium in Atlanta, GA, USA, during 20-22 March 1990. This symposium, under the title "International Symposium on Structural Integrity of Aging Airplanes" was organized jointly by the Georgia Institute of Technology (Center for Computational Mechanics) and the Transportation Systems Center (Cambridge, MA) of the U.S. Department of Transportation. Industrial and academic experts from several countries in North America, Europe and Asia, were invited to discuss their experiences and proposed solutions. This monograph contains the original papers that represent the expanded and edited versions of the talks presented at this symposium. This book aims to bring the collective experience, from across the world, with problems related to the structural integrity of aging airplanes to the attention of the professional and research community at large - in the hope that it may stimulate further fruitful research on this important topic of global concern. Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century. This book is a collection of well-researched newspaper articles published in Ghana in The Mirror over a six-year period (2011 - 2017), under the banners of Lokomotion Corner and Your DriveWorld. These articles will educate, inform, entertain and resonate with any reader, as a driver, vehicle owner, pedestrian or just a keen observer of traffic issues in the world out there. Cars are decidedly cool, and you will ultimately need to read this book to understand why we firmly believe so. Those were horrible days on the Karmans plantation of loved ones disappearing never to be seen again. Big Bill had struggled and schemed for over 15 years to escape the detestable conditions of the plantation, and all the hardships made his quest for freedom even greater. The Karmans were fond of both Neva and Big Bill especially Mrs. Karman who had a difficult time to let them leave the plantation as she was responsible for delaying their freedom for eight years. She held the deed papers for land her late husband had granted the Dawn's for their ultimate freedom. As the Dawn's departed the Karman plantation, they vowed never to return. As they traveled, they reflected back on their experiences as children on the plantation, how they became a couple, the desire for a family, and having their own home on their land. Neva was barren for fifteen years when departing the Karman plantation, but Big Bill believed they would still have the opportunity to have children under less stringent conditions as free people. Their journey becomes temporarily interrupted and intertwined with circumstances surrounding the Stanley family. The Stanleys were one of the elite families in Jefferson County. The Stanley family drama focused upon their two twin daughters, Molly and Lolly. The midwife, Odessa, had a daughter who became impregnated by Mr. Stanley around the same time as his wife. With the desire for her grandchild to have a better life, Odessa places her grandchild, Molly, as a twin to Mrs. Stanley's daughter, Lolly. Upon discovering the truth, Mrs. Stanley disengages affection to her favorite twin of the family making Molly's life miserable. However, Molly meets a rich well-to-do gentleman, Flango Scott, and they fall head over heels in love with each other before her untimely death on the eve of her sister's wedding. Molly's body was exhumed by Lolly's husband, Patterson, to determine the mystery surrounding Molly's death since she was a young individual without any medical concerns. Finally the Dawn's reached Leach Creek, and Big Bill built his cabin from trees he cut from his own land. While cutting through bushes, he cut through a clearance and there across the creek on a slight hill was the schoolhouse created from the summerhouse that Scott was planning to prepare for his beloved Molly. The school was built to educate all underprivileged children. After fifteen painful long years of being barren, Neva's wildest dream came true, discovering she was with child. The Dawn's welcomed the opportunity to have their children to attend that school someday. Riding a tsunami of information, the public has trampled on the temples of authority in every domain of human activity, everywhere. *The Revolt of the Public* tells the story of how ordinary people, gifted amateurs networked in communities of interest, have swarmed over the hierarchies of accredited professionals, questioned their methods, and shouted their failures from the digital rooftops. In science, business, media - and, pre-eminently, in politics and government - established elites have lost the power to command attention and set the agenda. The consequences have been revolutionary. Insurgencies enabled by digital devices and a vast information sphere have mobilized millions, toppling dictators in Egypt and Tunisia, crushing the ruling Socialist Party in Spain, inspiring "Tea Parties" and "Occupations" in the United States. Trust in political authority stands at an all-time low around the world. *The Revolt of the Public* analyzes the composition of the public, the nature of authority and legitimacy, and the part played by the perturbing agent: information. A major theme of the book is whether democratic institutions can survive the assaults of a public that at times appears to be at war with any form of organization, if not with history itself. Rapid development in the field precipitated by the increased demand for clean burner systems has made the *Industrial Burners Handbook* into the field's go-to resource. With this resource, bestselling author, editor, and combustion expert Charles Baukal, Jr. has put together a comprehensive reference dedicated to the design and applications of industrial Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of *Engine Building Professional*, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder

boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.
