Actual Energy Consumption in Dwellings Jul 26 2022

Residential buildings have continuously improved in energy efficiency, partly as a consequence of the introduction of energy regulations in many countries. Although better thermal properties and systems efficiency have lowered energy consumption for space heating in recent decades, substantial differences in energy consumption in similar dwellings are still being observed. These differences in consumption are thought to be caused by differences in occupancy patterns, by quality of construction and by rebound effects. This research addresses the effect of energy performance regulations and occupant behaviour on energy consumption for space and water heating in dwellings built after the introduction of the energy performance regulations in the Netherlands. The results of this research show that improving the energy efficiency of buildings alone is not enough to decrease that energy consumption.

Pervasive Computing Sep 15 2021 The 7th International Conference on Pervasive Computing (Pervasive2009) was the first time the conference was held in Asia. Before reaching Asia, the conference made a long journey around the globe: starting in Zurich, traveling to Linz and Munich, then passing through Dublin before leaving Europe for the first time to

be held in Toronto, followed by Sydney last year and now Nara, Japan. Over the last few years, Asia has contributed to the topics of Pervasive Computing with research ideas, engineering and many innovative products, so it was wonderful to host the conference in Asia. When the Pervasive Computing conference series started in 2002, the integration of computing systems into everyday products was just beginning. Seven years later we now see – especially in many parts of Asia – the widespread use of computing technology embedded into our daily lives. Pervasive 2009 focused on the presentation and discussion of novel aspects of architecture, design, implementation, application and evaluation of Pervasive Computing, thus enabling a closer and more frequent use of computing systems. As the field of pervasive computing matures, the Pervasive Conference gains significance worldwide, not only among researchers, but also in industry and general society.
